

CSS Selectors Assignment

Topic: CSS Selectors (Without Attribute Selectors)

Objective

In real-world projects, developers are not told which selector to use. They are given requirements and must identify the appropriate selectors themselves.

This assignment is designed to help you think like a Frontend Developer by understanding requirements and applying the correct selectors.

Rules

- Use HTML and CSS only.
 - Do NOT use JavaScript.
 - Do NOT use Inline CSS.
 - Do NOT use Attribute Selectors.
 - Choose appropriate selectors based on the requirements.
-

Scenario 1: AchieversIT Student Dashboard

You are developing a Student Dashboard for AchieversIT.

Requirements

1. The website title should have a unique appearance.
 2. All student cards should have a consistent design.
 3. Student names should appear differently from other text.
 4. Course descriptions inside student cards should have a different color.
 5. The first student card should be highlighted as "Top Performer".
 6. Every alternate student card should have a different background.
 7. Add a graduation cap icon before every course name.
 8. Add a "Certified" badge after every completed course.
 9. The Enroll button should react when a user hovers over it.
 10. The first letter of the student description should be larger than the rest of the text.
-

Scenario 2: E-Commerce Product Page

You are creating an online shopping website.

Requirements

1. The website logo should have a unique style.

2. All product cards should have a common design.
 3. Product names should be displayed prominently.
 4. Prices inside offer sections should have a special appearance.
 5. The first product should display a "Hot Deal" indicator.
 6. The last product should display a "Limited Stock" indicator.
 7. Alternate product cards should have different backgrounds.
 8. Add a shopping cart icon before every product name.
 9. Add a discount badge after selected products.
 10. The Add to Cart button should react on hover.
-

Scenario 3: Company Employee Portal

You are developing an Employee Management System.

Requirements

1. The company name should have a unique style.
 2. All employee cards should have a common design.
 3. Employee names should stand out from other content.
 4. Employee details inside cards should have a different color.
 5. The employee immediately after the Team Lead should be highlighted.
 6. All employees appearing after the Team Lead should have a light background.
 7. The first employee should be marked as "Star Performer".
 8. The last employee should be marked as "Support Team".
 9. Add an employee icon before every employee name.
 10. Highlight alternate employee cards.
-

Scenario 4: Restaurant Website

You are building a Restaurant Website.

Requirements

1. Restaurant name should have a unique appearance.
 2. All menu items should have common styling.
 3. Menu item descriptions should have a different text color.
 4. The first menu item should display "Most Ordered".
 5. The last menu item should display "Chef Recommendation".
 6. Alternate menu items should have different backgrounds.
 7. Add a plate icon before every menu item.
 8. Add a "Chef Special" badge after selected dishes.
 9. Buttons should react on hover.
 10. The first letter of each menu description should be larger.
-

Scenario 5: LMS Assignment Portal

You are creating an LMS Assignment Portal.

Requirements

1. Assignment page title should have a unique style.
 2. All assignment cards should have a common design.
 3. Assignment descriptions should have a different color.
 4. The first assignment should display "New Assignment".
 5. The last assignment should display "Deadline Soon".
 6. Alternate assignment cards should have different backgrounds.
 7. Submission button should react on hover.
 8. Add a document icon before every assignment title.
 9. Add a submission status badge after completed assignments.
 10. The first letter of assignment descriptions should be larger.
-

Bonus Challenge

Netflix Home Page Clone

Create a Netflix-style home page.

Requirements

1. Style navigation links.
 2. Highlight the active menu item.
 3. Movie cards should have a common design.
 4. The first movie should display "Top Pick".
 5. The last movie should display "Recently Added".
 6. Alternate movie cards should have different backgrounds.
 7. Add a play icon before movie titles.
 8. Add a rating badge after trending movies.
 9. Movie cards should react on hover.
 10. Movie descriptions should have styled first letters.
-

Submission Guidelines

- Create separate HTML and CSS files.
- Use meaningful class and id names.
- Maintain proper indentation and formatting.
- Follow all requirements carefully.
- Attribute Selectors are strictly not allowed.
